

***No Serious Photographer
should be without!***

**Wireless
remote
LIVE-VIEW
display,
lets you see
what your
camera
sees.**

Pro-View is the new *LIVE-VIEW* digital technology that lets you see what your camera sees. With the Pro-View you can frame your shot by viewing the scene on a sleek, wireless, digital, hand-held color display, no matter where or how the camera is positioned.

The Pro-View has 2 parts:

- Video transmitter unit that slips onto the eyepiece of your digital SLR camera
- Hand-held color display receiver that lets you see what your camera sees

PRO-VIEW BENEFITS:

- Capture shots around, above, or below obstructions (crowds, buildings, trees, etc.)
- Comfortably take low- and high-level shots while viewing and framing, as if viewing at eye level
- Reliably achieve intriguing angles and perspectives
- Choreograph group or portrait shots without all the shouting and waving
- View composition as far as 500 feet from the camera
- Vibrant hand-held color display
- Small enough to fit in your pocket, light-weight for your bag
- Compatible with a wireless shutter release for fully remote photography
- Microphone provides audible confirmation of focus and shutter release

Remember those shots that got away?

They probably still haunt you. Sure, you tried. The truth is you had no other choice, separated from your target by an obstruction, be it a bustling room of wedding guests, unruly sports spectators, or the mob at a celebrity event. You were forced, in those moments, to heave the camera above your head, point, and hope for the best. ***It got away!***

Or maybe you tried an intriguing perspective shot, but the fast-moving scene wouldn't allow opportunity to compose the pic. ***It got away!***

And no photographer enjoys multiple trips to and from the camera to choreograph subjects, or relishes another back-aching hour lying in the mud to get ground-level macro shots. Maybe the shot didn't get away, *but it sure didn't come easy.*

Now, imagine the **creative** shots you could achieve and the **hours** you would save by always **seeing what the camera sees**, and having the freedom to move from behind the confines of your equipment.

PRO-VIEW FEATURES

- Vibrant 3.5-inch color display (640 x 480 VGA) with built-in speaker
- 2.4GHz **digital** FHSS technology
- Compact over-the-eyepiece video transmitter with built-in microphone
